

NETWORK RESILIENCE IN HEALTHCARE

Comprised of thousands of interconnected devices, healthcare organizations are constantly integrating new technologies into their infrastructure to provide better patient experiences. As more IoT devices and other tools are added, a greater strain is put on the network which increases the likelihood of a disruption.

The Opengear Solution

If a network disruption does occur, these critical systems and devices are rendered useless. Here's why Opengear is a critical component to maintaining a healthy IT infrastructure

Network Resilience

Ensure critical IT systems are always available with a secure alternate path to devices outside of the product network.

Enterprise-Grade Security

Monitor and access networks securely to support the most stringent security and encryption requirements.

Always-On Connectivity

Utilizing Failover to Cellular™, WAN connectivity can be restored without manual intervention.

**Every minute counts , rely on Opengear
to keep your network healthy**
