

Position: Engineer II
Job Location: Sandy, UT
Department: Engineering
Reports To: Engineering Manager

Who We Are:

Opengear designs and manufactures products for data center and remote site management. We are a rapidly growing supplier of sophisticated data center, network and remote site management products. Our customers include tech unicorns and Fortune 100 companies. We are the leading supplier of out-of-band solutions for IT infrastructure management and are actively exploring new solutions for hyper-scale data center deployment and management. We are a global company with offices in Brisbane – Australia, Sandy – Utah and Edison – NJ.

As a Software Engineer II, you will work as a member of an Agile team delivering features for our Next Generation Console Server product line. The role is ideally suited for someone who has two or more years of experience.

What We Offer:

- Challenging software development environment on our own in-house designed hardware devices
- A collaborative, international Agile environment
- Being part of a growing company with in-demand products
- A competitive salary and generous benefits package

What You Will Do:

- Work as part of an Agile team building the software of our next generation hardware devices
- Be part of the whole software process, from design right through to testing and deployment
- Champion good development practices and contribute to our continuous test suite by writing high quality automated tests.

Who You Are:

Required

- Have at least 2 years' commercial experience in software development with Python on Linux
- Have some commercial experience in software development with C on Linux
- Have some exposure to JavaScript web application development
- Good knowledge of Linux
- Have experience working in an Agile team environment.

Bonus

- Experience with networking technologies
- Operating system architecture
- Yocto
