

# BUILDING A BRIDGE TO THE FUTURE

Enterprises today are once again putting digital transformation at the center of their organizational agendas. The network remains fundamental to every company's transformation approach particularly for technologies including mobility, IoT, analytics and cloud solutions. Always-on access is critical for remote employees, engineers and customers to work and operate effectively. Any type of disruption in turn will inevitably hit business productivity, efficiency and the reputation of the organization.

**Getting digital transformation right is key for every organization today.**

**A recent global study of CIOs and Network Engineers commissioned by Opengear, uncovered that in the digital transformation decision making process:**

**90% of CIOs** are involved

**13% of network engineers** are involved

**58% of network engineers** feel more pressure in the new age of technologies such as IoT and 5G

**84% of network engineers** say the range of tasks they perform has changed massively in recent years

**78% of CIOs** have made more use of networking and IT teams for higher value tasks over the past two years

**39%**

of CIOs see lack of skills/resource as a main barrier to digital transformation in their organization today

On average CIOs report a **30% vacancy rate** within their network engineering department
